

Patient insight to inform the content of Surrey Care Record public information video

The Surrey Care Record (SyCR) is a local, digital shared care record for health and care professionals across Surrey Heartlands. It allows the secure sharing of patient data between authorised health and care professionals for the purposes of delivering safer, quicker, and more coordinated local health and care services.

- *Do you understand how your health information is stored and accessed by your health care professionals?*
- *Do you have a story to tell about a health care experience which was affected by the way your information was shared?*

Surrey Heartlands Health and Care Partnership and Healthwatch Surrey would like to hear your stories and views to help us produce Surrey Care Record public information communications including a short video.
