

Online Survey

Do you have a long-term health condition? Support someone with a long-term health condition? Or work as a Clinical Professional in this area?

Long-term health conditions may include, but are **not** limited to, heart disease, lung disease, diabetes, stroke, neurological disorders such as dementia, bone, and skin diseases.

If so, we would like to invite you to take part in our online questionnaire. This takes approximately **10 minutes to complete**. Our aim is to understand thoughts and opinions about the use of in-home smart technologies (such as smart watches, health apps, blood pressure monitors and other devices) to support and improve healthcare.

The RESILIENT study

This questionnaire forms part of the **RESILIENT research study** (Predictive approaches in managing people with long-term conditions at risk of dementia).

The study investigates whether assistive technologies, that enable continuous health monitoring, can be used to help people manage their conditions at home. We also want to see if this data can help individuals and healthcare professionals make better, more informed clinical decisions about healthcare.
